## **Application forecast available to support project planning and promote efficiency**

The Alberta Utilities Commission (AUC) has released an updated [36-month application forecast](#) to guide resource planning and increase efficiency in its review process through proactively coordinating and planning for other regulatory responsibilities such as consultations, inquiries and Commission-initiated proceedings.

Each year the AUC collects application forecast information from regulated entities to assist the AUC and other stakeholders with their planning. Application and project information is received and consolidated into the forecast spreadsheet listing the applications utilities expect to file in the next 36 months. The application forecast is updated annually and can be found using the link above or on the AUC's [Forms, templates and reference material](#) webpage.

The AUC also provides an automated [list of applications](#) that have already been registered through the [eFiling System](#) and are currently under review.

To access an application please note the associated proceeding number and log in to the eFiling System. For more information visit how to [apply or access applications](#).

If you have questions please contact [info@auc.ab.ca](mailto:info@auc.ab.ca) or by phone at 403-592-4500.
