

Release summary

An updated version of the eFiling System is being released on December 10, 2022. The focus of this particular release (version 1.06.07) is on enhancements, minor defects and under the hood technical enhancements.

These release notes provide the details of the release and are grouped by functional areas.

New features

A new feature is a functional change that has been requested and approved to be incorporated into the system.

Description of change

Find

The eFiling System *Find > Regulatory documents, Applications, and Dispositions* screens, and website page *Recent updates*, are updated to retrieve and display results for all applicants of a proceeding. The *Primary applicant* columns displayed in screens and exported reports are renamed to *Applicant(s)*.

Filings

New filing type *Reply to AUC correspondence* is added. The filing type represents the deadline for external parties to respond to AUC correspondence and is only available when the AUC creates the associated schedule type.

Schedule

New schedule type *Reply to AUC correspondence* is added.

Fixes

A fix is a correction to the system where it was producing an error or was not operating as originally designed.

Description of change

Single user profile

Single user profiles are now automatically recognized by the system as confidential administrators. The fix enables system notifications to be issued to the single user when a third party files an undertaking requesting access to the single user's confidential information.

Applications

A system error triggered by changing the application type in an existing draft application form is resolved. The fix ensures that the draft application form clears existing data and generates a new form for any new data requirements as a result of the new application type. The message confirming loss of data from the existing draft application form is restored.

Find

System functionality to look up multiple parties at one time is fixed to recognize and retrieve search results for user and organizational names that contain a comma in the name.

Directions

Permissions are fixed to only allow the responsible party assigned to a direction to map a response to that direction.

In the *Direction details* screen, the *Proceeding satisfying direction* window now updates when the proceeding satisfying the direction changes.

Filtering menus available on the *Find Directions* and *My Directions* screens are updated to remove internal statuses.

Registered parties

Spelling errors are corrected in the *Participant registration* form.

Inconsistent enforcement of optional and mandatory land locations in the *Participant registration* form is resolved.
